About Zethereum

An open source, smart contract-based stablecoin True financial interoperability requires a price stable means of value exchange. Zethereum technology for fiat-backed stablecoins brings stability to crypto. The initial implementation is USD Coin (USDC), an ERC-20 token creating possibilities in payments, lending, investing, trading and trade finance — and the ecosystem will grow as other fiat currency tokens are added.

As more goods and services are tokenized, smart contract platforms will become fundamental building blocks of value exchange. Zethereum open-source and transparent stablecoin framework allows fiat to interact with smart contracts, giving developers a viable way to use real world currencies in blockchain applications.

Zethereum stablecoins are issued by regulated and licensed financial institutions that maintain full reserves of the equivalent fiat currency. Issuers are required to regularly report USD reserve holdings, and that information will be made available upon request.

Ease of Use

Our smart contract creation platform is user-friendly. Thousands of ready made templates to choose from will be available for customization.

Minimal Cost

Using our smart contract templates and platform wouldn't hurt your budget. Would cost you less than a cup of coffee.

Flexibility

We will accept SOS Token, Ethereum and Bitcoin as payment for using our platform. We might add a few cryptocurrencies in the future.

Marketplace

Cannot find a smart contract template that doesn't suit your needs? Need a customized template, but can't do it yourself? Hire another platform user through our Marketplace.
